# Metal/Wire Scouring Pads

Always follow the cleaning instructions detailed in Good Hygiene Practice Guide No: 12 – Cleaning

## Why?

The use of metal / wire scouring pads is not permitted in food storage, handling, preparation and service areas due to the risk of foreign body contamination.

## How?

Where metal / wire scouring pads are used, wire from the scouring pads can be shed during use, and these wire strands find their way into cooking containers and food products, resulting in foreign body incidents and customer complaints. Ingestion of metal strands can result in injury.

## Remember

## Never use metal / wire scouring pads!

**MORE INFORMATION**

Refer to GHP12 Cleaning, Food Safety Conversation 12: Cleaning

Approved non-metal / non-wire scourers are available to order through Bunzl
