

KEG MOVEMENT

When moving keg with a trolley or on a pallet truck it is essential the kegs are secured so that they cannot fall and injure staff or anyone else in the area.

As a minimum kegs must be pallet wrapped during transport. Alternatively use a trolley with fold-down sides or a rack that can be easily loaded and unloaded and is designed to contain loads.

Ensure that you do not exceed the maximum capacity for the pallet truck, trolley or any other manual handling being aid used.

If you have to move keg during an event, do this as a team of two, with one person walking ahead and one behind, so that you can ensure the path is clear and you can prevent collisions with people in the area.

MORE INFORMATION

Refer to STCCS46 Cellar operations, STCCS71 Changing keg and Cellar and Bar Management HSE Guidance for more information.
